

Gingerbread Spindle Installation Instructions

- 1) Install Wall Mounts with screws on Porch Column or post as shown. Wall mounts should be centered and placed about $7 \frac{11}{16}$ " apart or between each other. It may be necessary to modify post skirts and ceiling where wall mounts come in contact.
- 2) Cut Gingerbread Rails to desired length. Make sure to include screw heads when measuring. It will also be necessary to cut material from both ends of the rails to keep Gingerbread Spindles spaced evenly.
- 3) Slide top Gingerbread Rail into wall mounts, holes facing down.
- 4) Fasten top of Gingerbread rail to soffit or ceiling by installing a screw through the center spindle hole and into ceiling. This will keep the rail from sagging.
- 5) Install wall mount covers into the top wall mounts. Make sure that covers are turned properly as one end is tapered for ease of installation.
- 6) Install Gingerbread Spindles into top rail by inserting through the top rail and snapping into place.
- 7) Install bottom rail into Gingerbread Spindles and snap into place. Rail will need to be rotated or pulled outward and away from bottom wall mounts while doing this. After rail is snapped onto Gingerbread Spindles, insert bottom rail into the bottom wall mounts.
- 8) Install wall mount covers into bottom wall mounts.
